

# Capnoxygen®

A photograph of a patient lying on an operating table in an operating room. The patient is wearing a blue surgical cap and a clear, form-fitting Capnoxygen mask over their nose and mouth. A clear tube is connected to the mask. In the foreground, the profile of a surgeon wearing a blue surgical cap and mask is visible, looking towards the patient. The background shows medical monitors and the sterile environment of the operating room.

The Capnoxygen® mask is a consistent means to monitor breathing of a non-intubated patient, allowing sampling of exhaled carbon dioxide from both the mouth and nose while at the same time administering oxygen.

## Capnoxygen® Mask Advantages

- Soft, form-fitting for comfort
- Speedy hook up to CO<sub>2</sub> monitor and oxygen
- Incorporates a bevel tip sample tube to acquire CO<sub>2</sub> samples
- Star lumen non-kinking tubing
- Ideal for conscious sedation, regional anesthesia and monitored anesthesia care
- Not made with natural rubber latex
- Works for nose and mouth breathers

# Oxygen Masks for Breath to Breath Monitoring

Medium Concentration

If you've been using nasal sampling devices you're probably familiar with their limitations. The nasal sample tubes are easily dislodged from proper position or occluded against the nasal mucosa. When the patient converts to mouth breathing, nasal devices simply don't work! Moving the nasal sampling devices from nose to mouth is troublesome and problems arise with sample tube occlusion and cleanliness. If you've been adapting IV catheters and rigging your own, you will have had problems with the catheter kinking or the catheter simply falling out.

## Now there is a device ideal for conscious sedation.

The Capnoxigen® Mask is a consistent means to monitor breathing of a non-intubated patient, allowing sampling of exhaled carbon dioxide from both the mouth and nose while at the same time administering oxygen. It is made from Clear Medical Grade Resin that is latex-free. The mask is soft and allows form-fitting comfort for the face. The tubing is non-kinking (star lumen). The design makes it simple and fast to hook up to oxygen.

## Monitor Patient While Administering Oxygen

The Capnoxigen® Mask incorporates a bevel tip sample tube in the mid dome of a medium concentration oxygen mask. Simply connect the male end of the sample line from any sidestream CO<sub>2</sub> sample system, to the female luer connector on the Capnoxigen® Mask.

## See for Yourself

Product Code	Mask Size	O <sub>2</sub> Tubing Length	Sampling Line Length	Case Quantity
<b>Capnoxigen®</b>				
CO2-01	Adult	7'	n/a	25
CO2-01-SLM	Adult	7'	8'	25
CO2-01-SLM-14	Adult	14'	15'	25
<b>Capnoxigen® Ophthalmic</b>
